

INDUSTRIAL MOBILE DESSICANT DEHUMIDIFIER 2000 CFM

570Kg, 1,930mm H x 2,330mm W x 820mm D

Large Industrial Desiccant Dehumidifier suitable for large-loss drying. Easy, convenient transport by trailer and caster wheels.

TYPICAL USES:

- Water Damage Restoration – Provides a low dew point air stream that will remove moisture from building materials which have water damage due to floods, storms and pipe bursts. They will quickly dry out wet buildings and structures to prevent mould growth. The use of this equipment reduces degradation of building materials and lowers the risk of mould due to high moisture levels.
- High Rise Water Damage – With the ability to fit into a freight elevator, this unit has the ability to dry out entire levels provided there is sufficient air distribution (eg. via air movers).
- New Construction Dehumidification – Speed the drying and during of construction materials. It also helps prevent odors and poor air quality due to microbial growth and mould.
- Industrial Preparation, Surface Coating and Corrosion Control – It can prevent condensation inside tanks before painting or industrial coating to ensure correct bonding.
