

LOW PROFILE AIR MOVER

9Kg, 45.7cm × 22.9cm × 61cm

Compact air mover used for drying down carpet, floors and structure after a flood. Minimal energy usage allows you to maximise the amount of equipment with the power available. Best suited for smaller jobs or as supplementary fans for our other equipment.

TYPICAL USES:

- Water Damage- Air Movers are essential for increasing the rate of evaporation.
- Carpet Drying- Great for evaporating water from carpet materials. They are designed for maximum airflow spread along the surface of carpet to increase the rate of evaporation.
- Structural drying- With multiple ways to set up the machine (flat, vertically, on an angle) these air movers are great for increasing evaporation from building materials.
- Low Power Usage- When putting a lot of air movers into a property, it's important not to overload the power circuit. These air movers use less than 1 amp of power, enabling you to use more air movers!

Specifications

Fan Speed Setting	1
Power Supply (V / hz)	230
Stackable	Yes
Air Flow (m3/hr)	1200
