

INDUSTRIAL MOBILE DESICCANT DEHUMIDIFIER 5000 CFM

2,000Kg, 1,920mm H × 2,560mm W × 1,270mm D

Commercial Industrial Dehumidifier

Used for lowering humidity in large commercial industrial environments. Used in flood damage drying, manufacturing, food industry, corrosion control and a range of other industries.

TYPICAL USES:

- Water Damage Restoration- Provides a low dew point air stream that will remove moisture from building materials which have water damage due to floods, storms and pipe bursts. They will quickly dry out wet buildings and structures to prevent mould growth. The use of this equipment reduces degradation of building materials and lowers the risk of mould due to high moisture levels.
- New Construction Dehumidification- Speed the drying and during of construction materials. It also helps prevent odors and poor air quality due to microbial growth and mould.
- Industrial Preparation, Surface Coating and Corrosion Control- It can prevent condensation inside tanks before painting or industrial coating to ensure correct bonding.
- Industrial condensation prevention in Manufacturing and Food Processing- Remove condensation to ensure high quality of food and goods.
- Marine Lay Up and Power Plant- Prevent corrosion in utility and industrial piping which may be sitting for long periods to lower ambient dew point.

Specifications

| | |
|-----------------------|-----------------------------------|
| Reactivation (Heater) | LPG / Electric |
| Air Flow (m3/hr) | 8000 |
| Power Requirement | 415 V / 32 Amp Gas / 160 Amp Elec |
| Dimensions | 256 x 192 x 127 cm- 2 Tonne |

Note

Industrial Mobile Desiccant Dehumidifier 5000CFM is available as a service and can-not be hired online. Please contact our friendly team to book this service or to find out more 1300 092 647
